Insurance agency growth & producer performance

Connect marketing. Develop producers. Understand the business results.

Designed to work alongside your agency management system.
One shared product, with private agency workspaces.

One product. Three connected areas of value.

OPERATIONS & GROWTH

Connect growth

Connect marketing channels, lead generation, producer activity and dependable follow-through.

PRODUCER DEVELOPMENT

Develop the team

Prepare with approved call guides. Review real calls, practise the gap and check later behavior.

PROFITABILITY & ROI

Understand results

See producer contribution, marketing return, operating costs and agency profitability together.

Proposed product capabilities. The development partnership is intended to establish usefulness and repeatable adoption.

Why these capabilities belong together

Growth brings the opportunity	Conversation insight helps explain lead fit and customer expectations.
Operations supports execution	Clear ownership and reminders help producers act on what they promised.
Coaching improves the conversation	Real customer situations give training a specific purpose.
Management sees the whole picture	The owner connects operating activity and producer performance to costs, profit and ROI.

One product connects what the agency does, how its producers improve and the financial results that follow.

The proposed partnership architecture

ANDREW

Growth, technology and product development

AGENCY OPERATOR

Insurance leadership and agency experience

PARTNER AGENCY Customers, producers, managers and real operating work

ONE SHARED PLATFORM Operations + producer development + financial intelligence

SCALABLE SAAS One shared product, with separate customer workspaces

Business relationships shown here are proposed. Agency ownership, product ownership and partnership terms remain open.

A growth and performance platform. Not an agency management system.

The AMS remains the record authority

Policy and carrier records
Servicing and transaction history
Commission and accounting records

The exact responsibilities depend on the agency's existing systems.

Our proposed responsibility

Connect acquisition to producer activity, continuous coaching and follow-through.

Bring verified business results into the same management view. Use approved agency records to connect activity with outcomes.

AMS products can also offer sales, marketing and AI. The difference to prove is the connected workflow and daily usefulness.

The operating and growth foundation

ATTRACT & ORGANIZE	Campaigns and funnels	Forms and source history	Assignment and calendars
FOLLOW THROUGH	CRM and conversations	Pipelines and next actions	Nurture and team handoffs
SERVE & UNDERSTAND	Service coordination	Reviews and referrals	Activity and dashboards

One connected workspace for growth and follow-through.

Supported AMS, carrier and financial records supply verified status and results. Connections require implementation and validation.

Every marketing channel feeds the same journey

A complete acquisition picture

Paid social and search
Organic search and local visibility
Content, email and SMS nurture
Referrals and partner relationships
Events, outbound and other sources

Connect the activity to the result

Carry source and campaign context into the producer conversation.

Track lead fit, response, follow-through and verified outcomes. Use customer questions to improve future messaging.

Keep assisted touches visible. Use defined attribution and time periods; do not count one customer as several new leads.

Lead management through the next conversation

01 Response and routing

Assign the right person, acknowledge the inquiry and offer an appropriate appointment.

02 Nurture and appointment support

Manage reminders, no-show recovery and approved follow-up across the customer’s preferred channels.

03 A shared relationship history

Keep source details, messages, appointments and next actions together so handoffs preserve context.

Automation follows agency-approved rules, permissions and contact preferences. Producers can update or pause the sequence.

Agentic management connects insight to action

OBSERVE

Read permitted conversations, tasks and agency activity.

INTERPRET

Identify commitments, missing information and unresolved work.

COORDINATE

Prepare the next action, assign an owner and request approval.

VERIFY

Check the result and bring unresolved exceptions to a manager.

AI prepares and explains. Approved workflows coordinate and check the work.

The proposed design depends on permitted source access and reliable integrations with the agency’s tools.

An executive operations assistant

A useful management brief

Open commitments and overdue work
Cases waiting on a customer or team member
Questions needing insurance judgment
Coaching needs with supporting evidence
Decisions that need the owner’s attention

Each item is ready to act on

What happened and why it matters
The source record and its timestamp
Who owns the next action
What is due and what remains uncertain
How completion will be checked

Intended benefit: less time reconstructing events across tools and more time making the decisions that require leadership.

Case coordination after the sales conversation

01 A complete handoff

Carry the customer’s context, agreed next step and required information into the application or case workflow.

02 Visible dependencies

Track missing documents, requirements and replies. Assign a responsible person and prepare the next reminder.

03 Verified progress

Use authorized case and carrier records to confirm status. Surface delays and route escalations to the insurance lead.

The system supports coordination. Authorized insurance professionals and carriers retain their respective decisions.

One continuous customer journey

01 Interest

Capture the inquiry, source and customer context.

Growth + systems

02 Connection

Route to the appropriate producer and agree the next conversation.

Systems + licensed team

03 Advice

Understand needs, explain suitable options and guide decisions.

Licensed team

04 Application

Coordinate requirements, information and team handoffs.

Insurance lead + systems

05 Placement

Confirm delivery, acceptance and policy status in source records.

Licensed team + carrier

06 Ongoing care

Coordinate service, relevant reviews and retention follow-through.

Agency team + systems

Across every stage: a clear owner, visible next action and enough context for the next person to continue.

Service and persistency remain visible

Support the ongoing relationship

Coordinate service requests and customer questions.

Prompt relevant reviews and approved referral requests. Track unresolved issues through to a confirmed response.

Surface work that may affect retention

Where permitted records support it, flag unresolved requirements, approaching review dates or service concerns.

Route sensitive issues to the appropriate insurance professional.

Persistency means policies remain in force over time. Timely service can support retention, but outcomes are not guaranteed.

Recruiting, onboarding and staff knowledge

01 Recruiting infrastructure

Organize candidates, interviews and onboarding tasks. Keep the agency's selection and readiness decisions with its leaders.

02 Approved knowledge at the point of work

Retrieve current SOPs, process guidance and approved training with source links. Escalate unanswered or ambiguous questions.

03 Learning that improves the system

Use repeated questions to reveal gaps in documentation, onboarding and training. The operator approves updates before reuse.

Intended benefit: fewer repeated interruptions, more consistent onboarding and guidance producers can find when they need it.

The operational benefits for an agency owner

AREA	WHAT THE SYSTEM SUPPORTS	INTENDED BENEFIT
Growth visibility	Connect sources, conversations and verified outcomes.	More informed acquisition decisions.
Daily management	Surface priorities with owners and supporting records.	Less searching and status chasing.
Case progression	Track dependencies, handoffs and missing information.	Fewer overlooked applications and service tasks.
Team support	Provide approved guidance and onboarding workflows.	Less repeated explanation and more consistent execution.
Accountability	Check completed work and flag unresolved exceptions.	Clearer follow-through with less manual supervision.

These are intended benefits to establish through use. The concept does not promise a particular performance improvement.

The conversation reveals the next move

A pipeline says

“Follow-up needed”

A useful starting point,
but only part of the story.

A manager also needs to know

What did the customer actually say?
What is holding the decision up?
What did the producer promise?
What should happen next?
Where does the producer need help?

The proposed system connects those answers to action and producer development.

An approved guide for the next conversation

Training mode: understand the why

Context: Rachel / paid-social inquiry / family protection conversation.

Guide: clarify her request, listen, summarize, agree the next step. Each prompt explains its purpose and links to the agency playbook.

On-call mode: the essentials

What would you like to understand?
Who would you like involved?
What should happen next?
Which time and channel work for you?

Save personal preparation notes without changing the approved guide.

Guides vary by approved workflow, insurance line and lead source. Agency leaders approve revisions; licensed judgment remains human.

FICTIONAL EXAMPLE

One conversation creates a clear plan

“I need to speak with my partner. Please email the summary and call me Thursday afternoon.”

CUSTOMER CONTEXT

Another decision-maker is involved.

AGREED COMMITMENT

Send the summary and reconnect Thursday.

COACHING OPPORTUNITY

Confirm a specific time before ending the call.

Customer statements remain separate from AI suggestions. The producer can review the source conversation.

Feedback a producer can inspect

REVIEW AREA	FINDING	EVIDENCE / NEXT IMPROVEMENT
Customer request	Demonstrated	02:14 Rachel requests an email summary and a Thursday call.
Listening and recap	Partial	02:29 Morgan agrees to send the summary; partner participation remains open.
Specific next step	Needs practice	02:29 no exact time is agreed. Offer a time and confirm channel and attendees.
Promise fulfilled	Not yet verified	The call alone cannot show a later send or callback. Inspect the activity record.

Sample Follow-through playbook, section 2.1. Findings support manager review; they do not establish why a sale was won or lost.

Follow-through reflects what was actually said

01 **Prepare the right follow-up**

Draft the requested summary message using the conversation context.

02 **Give the commitment an owner**

Assign the producer a task. Record the agreed day and confirm the exact time.

03 **Check what happened**

Verify the send and follow-up activity. Flag missing work or a new customer reply.

A scheduled task is a commitment. Completion needs evidence.

A manager can see where conversations stand

PRODUCER	CONVERSATION SIGNAL	NEXT ACTION	MANAGER ATTENTION
Morgan	Customer wants to involve a partner.	Send requested summary. Confirm Thursday call.	Coach on agreeing a specific next step.
Lena	Customer asked a product question.	Route question to the authorized insurance lead.	Check that the customer gets an accurate answer.
Alex	Producer promised a callback. No activity logged.	Verify whether the callback happened.	Escalate if overdue. Missing data is not proof of inaction.

Fictional examples. Each item would link to a permitted source, its timestamp and the responsible person.

A continuous producer improvement cycle

01 **Prepare and review against agency standards**

Use an approved call guide. Review permitted conversations with transcript evidence and explain the specific gap.

02 **Assign the right lesson and rehearse the moment**

Connect feedback to one short lesson and a realistic practice exercise. The producer tries a better response.

03 **Apply it, then inspect a later conversation**

Review whether the behavior changed. Verify promised work separately, and keep business outcomes visible.

A completed lesson is not proof of changed behavior. A better conversation is not proof that training caused a sale.

Training follows the producer’s actual needs

01 A new producer needs a clear foundation

Provide approved playbooks, process guidance and practice scenarios. A manager decides when the producer is ready.

02 An experienced producer needs specific feedback

Review patterns across conversations, identify an improvement and connect it to relevant training and practice.

03 A manager needs evidence of progress

Compare later conversations with the agreed coaching focus. Discuss examples and distinguish skill gaps from process constraints.

The system supports each producer’s development. Coaching follows the agency’s standards and customer needs.

Check for changed behavior on a later call

Before: September 18

Rachel: Please email the summary and call Thursday afternoon.

Morgan: Absolutely. I'll send the summary this afternoon and follow up Thursday.

Gap: no exact time or channel confirmed.

Later: September 24 / sample

Morgan: Would Tuesday at 2 PM by phone work, and would you like your partner to join?

Rachel: Yes, that works.

Observed: a specific next step agreed. Completion still requires activity evidence.

A manager may record improvement, request more evidence or revise the feedback. One sample does not prove a lasting skill change or revenue lift.

Marketing learns from the conversation

Inspect the customer evidence

Rachel asks to involve her partner.

Link that statement to the paid-social campaign and the producer conversation. Check other permitted calls before calling it a pattern.

Improve both sides of the handoff

Marketing: review whether appointment messaging should welcome a partner.

Producer: confirm attendees, channel and a specific next step. Track later evidence and verified outcomes.

A separate pattern of mismatched expectations could prompt a campaign clarification. Neither signal alone proves a cause of lost sales.

The producer benefits throughout the workday

BEFORE A CALL

Better preparation

Source context and an approved guide, with training explanations or concise on-call prompts.

AFTER A CALL

Clearer follow-through

A reviewed summary, suggested next steps and tracked commitments reduce reliance on memory.

OVER TIME

More useful coaching

Evidence-backed reviews, assigned practice and later calls show where behavior changes.

Intended result: more confidence and consistency, with more attention available for customers and insurance judgment.

One owner view of the whole agency

AGENCY PROFITABILITY

Revenue, operating expenses, profit, margin and cash received.

PRODUCER CONTRIBUTION

Conversion, commission revenue, direct costs and contribution by producer.

MARKETING RETURN

Spend, customers acquired, acquisition cost and return by source.

OPERATIONAL PERFORMANCE

Workload, delays, service costs and the activities behind the results.

Owner-authorized financial view. Drill from agency totals into producers, campaigns, costs and supporting records.

Understand each producer's contribution

Follow the financial result

Leads and appointments
Conversion and placed business
Commission revenue and chargebacks
Compensation and direct costs
Contribution after direct costs

Find the next improvement

Compare results over time.

Explore whether lead quality, follow-up, conversion or servicing cost explains the result. Connect the evidence to coaching and operational action.

Show contribution before shared overhead separately from profit after allocated overhead. Producers receive their own permitted view.

Know where agency money works hardest

Marketing by source and campaign

Connect spend to leads, customers and attributable commission revenue.

Show acquisition cost and return after defined attributable costs, with clear time periods.

Costs across the whole agency

Bring producer compensation, staff, software and other expenses into the agency view.

Track operating profit and margin, and identify where expenses are rising.

Display attribution and cost-allocation rules. Keep actual results separate from forecasts and incomplete cohorts.

Financial numbers the owner can inspect

01 Keep the important measures distinct

Premium written, commission revenue and cash received are separate. Chargebacks and costs remain visible.

02 Use the same calculations for every customer

The product applies shared metric definitions. Supported compensation and expense-allocation settings reflect each agency.

03 Make missing information visible

Link figures to source records, show data freshness and identify missing costs. Missing data must never look like zero cost.

Supported connections or structured imports supply the records. Financial access follows the user's role throughout the product.

The agency keeps control

01 Approved knowledge and coaching standards

Use the agency’s playbook, link feedback to evidence and flag uncertainty. Managers can correct guidance and stop actions.

02 Permission, privacy and accurate records

Use authorized recordings and messages, appropriate consent and access controls. Confirm case status in the relevant insurance records.

03 People own consequential decisions

Keep advice and insurance decisions with appropriately authorized people. Evaluate customer outcomes alongside activity and coaching signals.

Specific access, recording, licensing and data requirements need review for the chosen agency and implementation.

A clear division of contribution

AREA	ANDREW / GROWTH & SYSTEMS	OPERATOR / INSURANCE & AGENCY
Growth	Acquisition infrastructure, funnels, campaigns and source reporting.	Market insight, customer needs and review of insurance-facing claims.
Operations	Shared SaaS product, integrations, automation and financial reporting.	Validate agency workflows, financial inputs and required insurance judgment.
Insurance	Support visibility, administration and coordinated follow-through.	Licensed execution, compliance, product expertise, underwriting coordination and sales.
Relationships	Build the supporting systems and business administration.	Carrier / IMO / FMO relationships, appointments and case escalation, where applicable.
People	Recruiting infrastructure, onboarding systems and accessible knowledge.	Producer selection, insurance training, coaching and sales-quality standards.

Shared decisions: product direction, customer experience, responsibilities, ownership and how the system reaches other agencies.

Why an agency operator might want to partner

Value inside the partner agency

Shape the product through real agency work.

Improve operating visibility and producer development while seeing the costs, profitability and ROI behind agency performance.

A role in a scalable SaaS business

Contribute insurance and management expertise to a shared product.

Explore participation in software that can serve agencies and independent producers through standard editions.

Participation, ownership and commercial terms are discussion points. No share of future value is assumed or promised.

Developed with an agency. Built to scale.

DEVELOPMENT PARTNER

Prove it in real work

Use agency operations, producer conversations and financial records to validate the integrated product.

ONE SHARED PRODUCT

Improve the core once

Maintain common workflows, coaching and financial calculations. Release improvements across customers.

CUSTOMER ADOPTION

Standard onboarding

Customers connect supported accounts, invite users and confirm settings. The same product serves each workspace.

Each customer's data remains separate. Usefulness, repeatability and commercial demand must be established through use.

Standardization starts with the first build

01 A common product with agency settings

Shared workflows, coaching and financial calculations. Agency details, users, approved content and permitted settings are inputs.

02 One guided onboarding process

Connect supported accounts, import standard records, assign roles and confirm settings. Run readiness checks before activation.

03 Updates delivered through the product

Improve the common system centrally. Preserve customer settings and data boundaries as new versions are released.

The partner agency uses the same onboarding path intended for future customers. Supported integrations are defined product capabilities.

Repeatability is part of the definition of done

What a repeatable rollout means

A comparable agency can join through the same setup process.

Its team uses existing workflows and reports. A new customer does not require a separate software build.

What we measure during development

Time and effort to onboard
Data completeness and accuracy
Product usage and processing cost
Support needs and recurring issues
Reliable updates across customers

These are product acceptance goals, not achieved results. A feature needed across customers becomes part of the common roadmap.

Two product options. One underlying system.

Agency edition

A shared agency workspace for owners, managers and producers.

Includes operations, producer development, marketing ROI and agency financial reporting, with access defined by role.

Individual producer edition

A separate subscription and personal workspace for an independent producer.

Includes CRM, follow-up, coaching and personal business performance using that producer's own connected records.

Shared product capabilities with different entitlements. A personal subscription does not grant access to an agency's private information.

Each person sees the information they need

ROLE	PERMITTED VIEW	ACCESS BOUNDARY
Agency owner	Agency profitability, marketing ROI, costs and producer contribution.	Full agency financial access and control of permissions.
Agency manager	Assigned team performance, coaching and operational work.	Financial access only when explicitly granted by the owner.
Agency producer	Own leads, tasks, coaching and permitted personal performance.	No agency financial metrics, margins or other producers' private records.
Individual subscriber	Own business activity, coaching and financial results from own records.	A separate personal workspace; no agency data access.

Enforce permissions in dashboards, records, reports, exports and AI answers. Hiding a menu alone does not protect information.

The partnership conversation

Shared ambition	Does proving a shared SaaS product in your agency, then offering it to other customers, appeal to you?
Agency fit	Where would operations, producer development and financial visibility make the biggest difference?
Contributions	What expertise, team access and time could each of us bring to the relationship?
Working relationship	How would we make decisions, review the system and keep the agency in control?
Ownership and future value	How should we approach product IP, customer data, responsibilities and commercial participation?

The first decision is whether to explore a development partnership. Detailed structure and terms can follow mutual interest.

Help agencies operate.
Develop their producers.
Understand the financial results.

The same underlying system serving every customer.

Would you be interested in shaping and proving this product with me through your agency?
